

What is claimed is:

1. A compression molded product of quick-dissolving chlorinated isocyanuric acid, comprising:

- (a) trichloroisocyanuric acid,
- (b) sodium dichloroisocyanurate anhydrous salt,
- (c) magnesium sulfate and/or aluminum sulfate, and
- (d) calcium carbonate.

2. The compression molded product according to claim 1, wherein

the component (a) is contained in an amount of from 40 to 50% by weight,

the component (b) is contained in an amount of from 40 to 50% by weight,

the component (c) is contained in an amount of from 1 to 5% by weight, and

the component (d) is contained in an amount of from 1 to 10% by weight

each based on all the components.

3. The compression molding product according to claim 1, wherein

the component (a) has a particle size of 400 μm or less and contains particles having a particle size of 75 μm or less in an amount of from 70 to 90% by weight based

on all the particles of the component (a), and

the component (b) has a particle size of 600 μm or less and contains particles having a particle size of from 150 to 450 μm in an amount of 90% by weight or more based all the particles of the component (b).

4. The compression molded product according to claim 1, wherein the component (d) has a particle size of 15 μm or less and has an average particle size of 3 μm or less.

5. A process for producing the compression molded product according to claim 1, which comprises molding under compression a composition comprising:

- (a) trichloroisocyanuric acid,
- (b) sodium dichloroisocyanurate anhydrous salt,
- (c) magnesium sulfate and/or aluminum sulfate, and
- (d) calcium carbonate.
